

Diodes		
Component	Circuit Symbol	Function of Component
<u>Diode</u>		A device which only allows current to flow in one direction.
<u>LED</u> <u>Light Emitting Diode</u>		A transducer which converts electrical energy to light.
<u>Zener Diode</u>		A special diode which is used to maintain a fixed voltage across its terminals.
Photodiode		A light-sensitive diode.

Transistors		
Component	Circuit Symbol	Function of Component
<u>Transistor NPN</u>		A transistor amplifies current. It can be used with other components to make an amplifier or switching circuit.
<u>Transistor PNP</u>		A transistor amplifies current. It can be used with other components to make an amplifier or switching circuit.
Phototransistor		A light-sensitive transistor.

Audio and Radio Devices		
Component	Circuit Symbol	Function of Component
Microphone		A transducer which converts sound to electrical energy.
Earphone		A transducer which converts electrical energy to sound.
<u>Loudspeaker</u>		A transducer which converts electrical energy to

		sound.
Amplifier (general symbol)		An amplifier circuit with one input. Really it is a block diagram symbol because it represents a circuit rather than just one component.
Aerial (Antenna)		A device which is designed to receive or transmit radio signals. It is also known as an antenna.
