

C Programming

EXERCISE C27

Rewrite the program which copies files, ie, FCOPY.C to accept the source and destination filenames from the command line. Include a check on the number of arguments passed.

```
#include <stdio.h>

main( int argc, char *argv[])
{
    FILE *in_file, *out_file, *fopen();
    int c;

    if( argc != 3 )
    {
        printf("Incorrect, format is FCOPY source dest\n");
        exit(2);
    }
    in_file = fopen( argv[1], "r");
    if( in_file == NULL ) printf("Cannot open %s for reading\n", argv[1]);
    else {
        out_file = fopen( argv[2], "w");
        if ( out_file == NULL )
            printf("Cannot open %s for writing\n", argv[2]);
        else {
            printf("File copy program, copying %s to %s\n", argv[1], argv[2]);
            while ( (c=getc( in_file) ) != EOF )
                putc( c, out_file );
            putc( c, out_file); /* copy EOF
            printf("File has been copied.\n");
            fclose( out_file);
        }
        fclose( in_file);
    }
}
```
