ENUMERATED DATA TYPES

Enumerated data type variables can only assume values which have been previously declared.

```
enum month { jan = 1, feb, mar, apr, may, jun, jul, aug, sep, oct, nov, d  
enum month this_month;  
  
this_month = feb;
```

In the above declaration, *month* is declared as an enumerated data type. It consists of a set of values, jan to dec. Numerically, jan is given the value 1, feb the value 2, and so on. The variable *this_month* is declared to be of the same type as month, then is assigned the value associated with feb. This_month cannot be assigned any values outside those specified in the initialization list for the declaration of month.

```
#include <stdio.h>  
  
main()  
{  
    char *pwest = "west", *pnorth = "north", *peast="east", *psouth =  
    enum location { east=1, west=2, south=3, north=4};  
    enum location direction;  
  
    direction = east;  
  
    if( direction == east )  
        printf("Cannot go %s\n", peast);  
}
```

The variables defined in the enumerated variable *location* should be assigned initial values.
