## Controlling the cursor position

The following characters, placed after the \ character in a *printf()* statement, have the following effect.

| Modifier | Meaning                                             |
|----------|-----------------------------------------------------|
| \b       | <i>backspace</i>                                    |
| \f       | <i>form feed</i>                                    |
| \n       | <i>new line</i>                                     |
| \r       | <i>carriage return</i>                              |
| \t       | <i>horizontal tab</i>                               |
| \v       | <i>vertical tab</i>                                 |
| \\       | <i>backslash</i>                                    |
| \"       | <i>double quote</i>                                 |
| \'       | <i>single quote</i>                                 |
| \<enter> | <i>line continuation</i>                            |
| \nnn     | <i>nnn = octal character value</i>                  |
| \0xnn    | <i>nn = hexadecimal value (some compilers only)</i> |

```
printf("\007Attention, that was a beep\n");
```
