ACCEPTING SINGLE CHARACTERS FROM THE KEYBOARD

getchar

The following program illustrates this,

```
#include <stdio.h>

main()
{
    int i;
    int ch;

    for( i = 1; i<= 5; ++i ) {
        ch = getchar();
        putchar(ch);
    }
}
```

Sample Program Output

AACCddEEtt

The program reads five characters (one for each iteration of the for loop) from the keyboard. Note that *getchar()* gets a single character from the keyboard, and *putchar()* writes a single character (in this case, *ch*) to the console screen.

The file [ctype.h](#) provides routines for manipulating characters.
