2PCS DS3231 AT24C32 IIC Precision RTC Real Time Clock Memory Mod

Description

DS3231 AT24C32 IIC Precision RTC Real Time Clock Memory Module For Arduino:

Low-cost, extremely accurate I2C real-time clock (RTC), with an integrated temperature-compensated crystal.

The device incorporates a battery input, disconnect the main power supply and maintains accurate time. Integrated oscillator improve long-term accuracy of the device and reduces the number of components of DS3231 available in commercial and industrial temperature ranges, using a 16-pin 300mil SO package.

RTC maintains seconds, minutes, hours, day, date, month, and year information. Less than 31 days of the be automatically adjusted, including corrections for leap year.

Clock operates in either the 24 hours or band / AM / PM indication of the 12-hour format. Provides two cor and a calendar can be set to a square wave output.

Address and data are transferred serially through an I2C bidirectional bus.

A precision temperature-compensated voltage reference and comparator circuit monitors the status of VC failures, provide a reset output, and if necessary, automatically switch to the backup power supply.

/RST pin is monitored as generating μP reset manually.

Save time and high precision addition, DS3231 also has some other features that extend the system host a range of options.

The device integrates a very precise digital temperature sensor, through the I2C * interface to access it (a Temperature sensor accuracy is $\pm 3^{\circ} C$. On-chip power supply control circuit can automatically detect an standby power (i.e., low-voltage battery) to switch between the power supply.

If the main power failure, the device can continue to provide accurate timing and temperature, performance

When the main power re-power or voltage value returns to within the allowable range, the on-chip reset fur restart the system microprocessor.

Module parameters:

1. Size: 38mm (length) * 22mm (W) * 14mm (height)
2. Weight: 8g
3. Operating voltage :3.3 - 5 .5 V
4. Clock chip: high-precision clock chip DS3231
5. Clock Accuracy :0-40 $^{\circ} C$ range, the accuracy 2ppm, the error was about 1 minute
6. Calendar alarm clock with two
7. Programmable square-wave output
8. Real time clock generator seconds, minutes, hours, day, date, month and year timing and provide valid year compensation
9. Chip temperature sensor comes with an accuracy of $\pm 3^{\circ} C$
10. Memory chips: AT24C32 (storage capacity 32K)
11. IIC bus interface, the maximum transmission speed of 400KHz (working voltage of 5V)
12. Can be cascaded with other IIC device, 24C32 addresses can be shorted A0/A1/A2 modify default ad
13. With rechargeable battery LIR2032, to ensure the system after power failure, the clock move any natu
14. Packing: single anti-static packaging

Wiring instructions (with Arduino uno r3 for example):

SCL $\rightarrow$ A5

SDA $\rightarrow$ A4

VCC $\rightarrow$ 5V

GND $\rightarrow$ GND

Package Included:

DS3231 AT24C32 IIC Module x 2

Note: don't include battery,it's not safty to ship by air mail. hope you can understanding

Nice upgrade from DS 1307

Made a clock display with the 1307 and the time drifted. With the new unit time is solid. Slightly more expensive but worth it. Good quality unit. Pins not soldered which allows for custom wiring.
