NEW UNO R3 ATmega328P CH340 Mini USB Board for Compatible-Arduino

Main Changes from the older version:

- Add two rows of the holes for the pins. So it can be connected with normal Dubond line.
- Add 3 rows of the holes for wiring.
- Change the in-line package of ATMEGA328P to flat package.
- CH340G Replace ATmega16U2
- Plug UNO development board, the driver will be automatically installed.
- select the board UNO inside the die.
- Select the COM port, this can be in my computer queries, just inside your uno port development b
- You'd better to choose arduino own routine procedures, burn into the board

Package Included:

1 x NEW UNO R3 ATmega328P CH340 Mini USB Board for Compatible-Arduino

Works well

As someone said that these units has bad soldering and may even not work - I don't know about you but mine came soldered very good, aln (alignment is just a tiny bit off) and it works fine. Although in description it says it is plug and play. No, it's not, you have to download CH340 is easily found on google so no problem here anyways.

Great Item

This does what it says on the tin - it's an R3 arduino compatible. It works exactly as you'd expect. can't fault it. It uses mini USB rather than Micro so won't run off a fixed-wire phone charger but that's no biggie.

Great product for its value

I bought 3 of these and they all worked perfectly and the quality was fine too. You will need to download the CH340 driver for these units.
