

INTRODUCTION

MIKROELEKTRONIKA

What are microcontrollers, anyway? Electronics built into one single chip capable of controlling a small submarine, a crane, an elevator... It's up to you to decide what you want them to do and dump a program with the appropriate instructions into the chip. You're probably wondering what you need for it? Just a PC, a program for compiling and a simple device to transfer your code from the PC to the chip itself. Is it complicated? Absolutely not!
