SIZEOF

The `sizeof()` function returns the memory size of the requested variable. This call should be used in conjunction with the [*calloc\(\)*](#) function call, so that only the necessary memory is allocated, rather than a fixed size. Consider the following,

```
struct date {  
    int hour, minute, second;  
};  
  
int x;  
  
x = sizeof( struct date );
```

x now contains the information required by *calloc()* so that it can allocate enough memory to contain another structure of type *date*.
