

C Programming

SYSTEM CALLS

Calls may be made to the Operating System to execute standard OOps calls, eg,

```
#include <process.h>
main() /* SYS.C */
{
    char *command = "dir";

    system( "cls" );
    system( command );
}
```

Do not use this method to invoke other programs. Functions like `exec()` and `spawn()` are used for this.
